SUMMARY

Data Analyst with an M.Sc. in Data Science and hands-on experience owning sales, inventory and growth data at a D2C startup. Works end to end from Python cleaning and EDA to SQL analysis and Power BI dashboards, including 150K ride bookings over Rs. 52M revenue and 502,416 retail transactions, with a focus on data quality and insights stakeholders can act on.

SKILLS

Languages & Querying: Python, SQL (CTEs, Window Functions, Joins, Aggregations)
Data Analysis: Pandas, NumPy, Statistics, A/B Testing, Exploratory Data Analysis (EDA), Data Cleaning, Data Validation, RFM Segmentation, KPI Reporting
BI & Visualization: Power BI (DAX), Tableau, Excel (Power Query, Pivot Tables), Matplotlib, Seaborn, Google Analytics
Data Engineering: dbt, Apache Airflow, Data Modeling (Star Schema), ELT Pipelines
Databases & Tools: MySQL, PostgreSQL, Docker, Jupyter Notebook, VS Code, Git, GitHub, Notion

EXPERIENCE

Ozonit (D2C Skincare Startup) Delhi, India
Tech and Growth Lead (Early Hire) *11/2023 – 07/2024*

- Informed founders' restock, pricing and promotion decisions with product- and channel-level insights across 250+ orders a month and 4 products, by running a monthly sales analysis.
- Replaced manual monthly report consolidation with one auto-refreshing report, by building Excel Power Query pipelines that merged sales, inventory and order sheets.
- Kept 2,000+ units of stock reconciled every month, by managing inventory end to end: inward and outward logging and reorder levels.
- Grew Instagram followers 2.5x at 12% month-over-month, by leading growth across Instagram and offline channels (pop-ups, salons, retail stores, events) and A/B testing campaign creatives against sales data.

PROJECTS

Indian Ride Sharing Analytics GitHub
Python, Pandas, MySQL, Power BI

- Profiled revenue, cancellations, ratings and locations across 150K ride bookings, by cleaning the data in Python and writing 30 SQL queries with CTEs and window functions.
- Showed that 38% of bookings did not complete (driver vs customer cancellations) and Auto drove 25% of Rs. 52M revenue, by building an interactive Power BI dashboard.

E-Commerce Customer Sales Analytics GitHub
Python, Pandas, MySQL, Power BI

- Turned 502,416 online retail transactions into an analysis-ready dataset, by removing duplicates, cancellations and invalid prices in Python and analyzing revenue, orders and order value in MySQL.
- Found that Champions, 21% of customers, brought in about 57% of GBP 9.80M revenue, by segmenting customers with RFM and building a Power BI dashboard with KPI cards, trends and slicers.

Ride-Sharing ELT Pipeline and Data Warehouse GitHub
Python, PySpark, PostgreSQL, dbt, Airflow, Docker

- Loaded 2,083,221 NYC Uber and Lyft trips into a dbt star schema in PostgreSQL with 31 of 31 data quality tests passing, by building a monthly ELT pipeline with reconciliation checks between layers.
- Showed Uber averaging a $35.52 rider fare and a 5.9-minute wait against Lyft's $32.44 and 5.5 minutes, with drivers paid 63% to 64% of the fare, by querying the June star schema.

Sales Performance and HR Analytics Dashboards GitHub
Power BI, DAX, Excel

- Surfaced 16.1% attrition, with overtime staff leaving 2.9x as often, and sales, profit and margin by region and category, by building Power BI dashboards with DAX measures and slicers.

EDUCATION

M.Sc. in Data Science 2023 – 2025
CGPA 8

B.Sc. (Hons.) in Mathematics 2020 – 2023
CGPA 7.5
