SUMMARY

Data Analyst with an M.Sc. in Data Science and hands-on experience owning sales, inventory and growth data at a D2C startup. Works end to end from Python cleaning and EDA to SQL analysis and Power BI dashboards, including 150K ride bookings over Rs. 52M revenue and 502,416 retail transactions, with a focus on data quality and insights stakeholders can act on.

SKILLS

Languages & Querying: Python, SQL (CTEs, Window Functions, Joins, Aggregations)
Data Analysis: Pandas, NumPy, Statistics, A/B Testing, Exploratory Data Analysis (EDA), Data Cleaning, Data Validation, RFM Segmentation, KPI Reporting
BI & Visualization: Power BI (DAX), Tableau, Excel (Power Query, Pivot Tables), Matplotlib, Seaborn, Google Analytics
Databases & Tools: MySQL, PostgreSQL, Jupyter Notebook, VS Code, Git, GitHub, Notion

EXPERIENCE

Ozonit (D2C Skincare Startup) Delhi, India
Tech and Growth Lead (Early Hire) *11/2023 – 07/2024*

- Ran monthly sales analysis across 250+ orders a month and 4 products, giving founders and stakeholders product- and channel-level insights for restock, pricing and promotion decisions.
- Built Excel data pipelines in Power Query that merged sales, inventory and order sheets into one auto-refreshing monthly report, replacing manual consolidation.
- Managed inventory of 2,000+ units end to end: stock inward and outward logging, reorder levels and monthly reconciliation.
- Led growth across Instagram and offline channels (pop-ups, salons, retail stores, events), growing followers 2.5x at 12% month-over-month; ran A/B tests on campaign creatives and tied results to sales data.

PROJECTS

Indian Ride Sharing Analytics GitHub
Python, Pandas, MySQL, Power BI

- Cleaned and analyzed 150K ride bookings in Python, then wrote 30 SQL queries with CTEs and window functions on revenue, cancellations, ratings and locations.
- Built an interactive Power BI dashboard over Rs. 52M revenue, showing 38% of bookings did not complete (driver vs customer cancellations) and Auto drove 25% of revenue.

E-Commerce Customer Sales Analytics GitHub
Python, Pandas, MySQL, Power BI

- Cleaned 502,416 online retail transactions in Python (duplicates, cancellations, invalid quantities and prices) and analyzed revenue, orders, top products and average order value in MySQL.
- Segmented customers with RFM into Champions, Loyal Customers, Potential Loyalists and At Risk, and built a Power BI dashboard with KPI cards, monthly trends and country and date slicers.

Ride-Sharing ELT Pipeline and Data Warehouse GitHub
Python, PySpark, PostgreSQL, dbt, Airflow, Docker

- Built a monthly ELT pipeline that loaded 2,083,221 NYC Uber and Lyft trips into a dbt star schema in PostgreSQL, with 31 of 31 data quality tests passing, including reconciliation checks between layers.
- The June star schema showed Uber averaging a $35.52 rider fare and a 5.9-minute wait against Lyft's $32.44 and 5.5 minutes, with drivers paid 63% to 64% of the fare.

Sales Performance and HR Analytics Dashboards GitHub
Power BI, DAX, Excel

- Built Power BI dashboards tracking sales, profit and margin by region, category and month, and employee attrition rate by department, job role and gender, with KPI cards and slicers.

EDUCATION

M.Sc. in Data Science 2023 – 2025
Chandigarh University, CGPA 8 *Distance Learning*

B.Sc. (Hons.) in Mathematics 2020 – 2023
Graphic Era Hill University, CGPA 7.5 *Dehradun, Uttarakhand*
